

UNVEILING EARTH'S TREASURES: SUSTAINABLE DATA- DRIVEN GEOPHYSICAL EXPLORATION

OCT. 10, 2024 - SLB HOUSTON CAMPUS

In an age dominated by data, join us in a one-day interactive forum to discuss and learn about the dynamic topic of energy; discovery, sustainability, and future career opportunities. Our forum, "Unveiling Earth's Treasures," invites experts, innovators, and enthusiasts to delve into the pivotal role of data and technology in shaping a more sustainable future for energy exploration and management. The future is now, with a pressing need for innovative, efficient, and effective geophysical methods applied to the exploration and management of petroleum, minerals, renewables, and the environment. This event will focus on sustainability, emphasizing the importance of finding more efficient ways to acquire, process, and extract useful information from vast amounts of data—not only for profitability, but also to reduce the environmental impact of these operations. Through insightful discussions, interactive presentations, and career-focused sessions, we will engage in critical analysis of the profound technological transformation that is already reshaping the energy industry, while also advocating for sustainability and environmental stewardship.
